PROFESSIONAL SUMMARY

Full stack developer with 3 years of experience shipping backend systems and web interfaces, specializing in Spring Boot, Node.js/Express, and React. Has independently designed and built full products end-to-end — from database schema and microservices architecture through to deployment — including a production-style music streaming platform re-architected across two different backend stacks. Comfortable owning a project from spec to ship, not just implementing tickets.

TECHNICAL STACK

- **Languages:** Java, JavaScript (ES6+), PHP, SQL, Dart, HTML5, CSS3
- **Backend:** Spring Boot, Spring Security, Spring Data JPA, Node.js, Express, Prisma
- **Frontend:** React.js, Flutter/FlutterFlow, Tailwind CSS, Three.js
- **Data:** PostgreSQL, MySQL, Firebase Firestore
- **Infra & Tooling:** Docker, Kafka, RabbitMQ, Git/GitHub, Maven, Postman, Cloudinary
- **Practices:** RESTful API design, microservices architecture, RBAC/JWT auth

EXPERIENCE & PROJECTS

Freelance Software Developer — Remote / Abuja, Nigeria

Jan 2023 – Present

Muse — Full-stack music streaming platform (personal flagship project)

- Designed and built the platform twice to compare architectures: first as ~12 Spring Boot microservices (Kafka, Docker Compose, Eureka service discovery, per-service PostgreSQL, Feign clients), then re-implemented as a leaner Node.js/Express monolith with Prisma and PostgreSQL
- Implemented JWT authentication with httpOnly cookies and role-based access control (admin, user, premium user); integrated Cloudinary for media storage and Razorpay/Stripe for payments
- Built the React/Vite/Tailwind frontend with a real-time player and notification system, replacing mock data with a live service layer and session-restoring auth context
- Diagnosed and resolved production-style infrastructure issues across the Docker Compose stack, including Eureka registration failures and cross-service data consistency bugs

OSA Coaching App — client project

- Delivering the FlutterFlow UI and a WordPress REST API integration for a client's coaching app, writing custom Flutter/Dart logic in VS Code where the visual builder falls short

The Sculptor — free, ad-free calisthenics app (in development)

- Architecting a cross-platform fitness app (FlutterFlow) featuring a 3D body avatar, rendered with Three.js inside a Flutter WebView, that morphs based on the user's real body measurements
- Specced a Node.js/Express backend on Firebase Firestore, including six structured exercise-progression ladders covering 42 exercises across five training regions

EDUCATION

B.Sc. in Physics and Electronics

2023

Adekunle Ajasin University (AAUA), Akungba-Akoko, Nigeria
